4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **yt-seo-architect.vercel.app** for a **SaaS — free AI YouTube SEO tool (SoftwareApplication) with programmatic SEO glossary (EN/ES/PT), blog, and interactive tools** site, generated on August 03, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

67/100

SEO HEALTH SCORE

Critical Issues Found:

- 1. Info:** 324-URL 'double-vs' glossary family ~73% broken (est. ~240 404s): `/{{term}}-vs-vidiq-vs-tubebuddy` and `/{{term}}-vs-tubebuddy-vs-*` URLs 404 in sitemap; also `/glossary/vidiq-vs-tubebuddy EN+ES 404` (PT works)
- 2. Info:** 5 remaining identical blog/tools slug pairs cannibalize (both indexable): `youtube-for-tutorials-2026`, `youtube-intro-hook-first-3-seconds`, `youtube-monetization-tips-2026`, `youtube-seo-for-business-channels-2026`, `youtube-seo-for-gaming-channels-2026`
- 3. Info:** Canonical loop on `/tools`: canonical points to `/tools.html` which 308-redirects back to `/tools`
- 4. Info:** Missing canonicals on `/about`, `/privacy-policy`, `/terms-of-service`, `/contact`; duplicate canonical on some blog posts (e.g. `/blog/youtube-tags-2026`)
- 5. Info:** `llms.txt` stale/shallow: 17/50 blog posts, zero glossary entries (18k pages), `llms-full.txt` embeds a 'Page not found' section for `/blog/generic-hero`

Quick Wins:

1. Regenerate sitemap without the 324 double-vs URLs + fix `/glossary/vidiq-vs-tubebuddy EN/ES` (removes ~240 404s in one deploy)
2. 301 the 5 residual `/tools/*` twins to `/blog/*` (or noindex the thin tool variants)
3. Fix `/tools` canonical to `https://yt-seo-architect.vercel.app/tools`
4. Add self-referencing canonicals to `/about`, `/privacy-policy`, `/terms-of-service`, `/contact`
5. Regenerate `llms.txt/llms-full.txt`: all 50 blog posts + top glossary terms, strip broken entries

2. Audit Categories

2.1 Technical SEO

Score: **72/100**

What Works

- Sitemap 18,090 URLs with lastmod on 99.7% (was 49 URLs); noindex core pages removed
- Prior ~29% sitemap 404 rate reduced to ~1.3% (one generator family remains)
- Strong security headers: strict CSP with AdSense+jsdelivr whitelisted, HSTS preload, nosniff, frame-options, security.txt
- robots.txt allows all major AI crawlers; blocks only dev paths
- Removed blog post returns correct 410 Gone

Findings

324 'double-vs' glossary URLs ~73% broken (~240 est. 404s) **Critical**

Pattern `{term}-vs-{tool}-vs-{tool}` (tool=vidiq,tubebuddy). Sample 30 → 22 404. Plus `/glossary/vidiq-vs-tubebuddy` EN and ES 404 while PT renders.

Recommendation: Exclude slugs with 2+ -vs- segments from the glossary generator and sitemap; fix the vidiq-vs-tubebuddy EN/ES render path.

`/tools` canonical points to redirecting `tools.html` **High**

canonical href=`.../tools.html`, which 308-redirects to `/tools` (canonical-to-redirect loop).

Recommendation: Change canonical to `https://yt-seo-architect.vercel.app/tools`

Missing canonicals on 4 core pages **High**

`/about`, `/privacy-policy`, `/terms-of-service`, `/contact` have no canonical tag.

Recommendation: Add self-referencing canonical to each.

Duplicate canonical tags on some blog posts **High**

`/blog/youtube-tags-2026` emits 2 identical canonical links.

Recommendation: Ensure blog template emits exactly one canonical.

/blog/generic-hero orphan returns 200 Low

Stub page returns 200 and leaks into llms-full.txt as 'Page not found'.

Recommendation: 410 or remove it.

2.2 Content Quality

Score: 60/100

What Works

- Blog JSON-LD fixed — Article+FAQPage valid on 10/10 sampled posts (was ~50% unparseable)
- /about indexable again; 50 blog posts all live with H1s, metas, internal links

Findings

E-E-A-T still thin High

Anonymous authorship, Gmail contact, no author pages, no Person schema. Money-adjacent niche.

Recommendation: Add named author + author pages + Person schema; improve About page.

AI-template blog titles persist Medium

'Learn how to X 2026' pattern across many posts.

Recommendation: Rewrite titles for click-value and differentiation.

Boilerplate tool descriptions Medium

~95 tool pages + llms.txt use identical filler text.

Recommendation: Unique value proposition per tool.

Blog SERP titles truncated Low

73-76 char titles with visible '...' truncation.

Recommendation: Trim to <=60 chars without ellipsis.

2.3 On-Page SEO

Score: **65/100**

What Works

- Titles+metas on homepage, tools, blog, glossary, vs, guide
- Single H1 on blog posts; correct hreflang en/es/pt/x-default on glossary
- Homepage canonical correct; OG tags complete with valid 197KB og-image.png

Findings

5 identical blog/tools slug pairs both indexable **Critical**

/tools/{5 slugs} thin 'Free Interactive Tool' variants compete with /blog/{same} full articles.

Recommendation: 301 tools → blog or noindex tool variants.

/tools canonical loop **High**

Canonical → tools.html → 308 → /tools.

Recommendation: Point canonical at /tools directly.

Missing canonicals on core pages **High**

about/privacy/terms/contact.

Recommendation: Add self-canonicals.

Title lengths over guidance **Medium**

Home 65 chars; blog SERP titles 73-76 chars truncated.

Recommendation: Shorten titles.

2.4 Schema / Structured Data

Score: **80/100**

What Works

- Homepage single valid block: SoftwareApplication+FAQPage+Organization+WebSite+BreadcrumbList+SearchAction
- Blog Article/FAQPage valid; glossary Definition JSON-LD valid with hreflang

Findings

No Author/Person schema **Medium**

Weakens E-E-A-T structured signals.

Recommendation: Add Person schema linked from articles.

No VideoObject schema **Low**

Product targets YouTube creators but no VideoObject anywhere.

Recommendation: Add where relevant.

2.5 Performance (CWV)

Score: **65/100**

What Works

- Homepage fully server-rendered (no client content dependency) — well-positioned for CWV
- Vercel edge caching active (x-vercel-cache: HIT)

Findings

No fresh field data **Medium**

PageSpeed API 429 (quota) at test time; no CrUX/GSC credentials.

Recommendation: Add GOOGLE_API_KEY, run scripts/fetch-crux-field-data.mjs.

Large single sitemap file **Low**

3.4 MB / 18,090 URLs.

Recommendation: Split into sitemap index files.

2.6 AI Search Readiness

Score: **72/100**

What Works

- robots.txt allows all major AI crawlers

- llms.txt + llms-full.txt published with brand line and blog index
- Clean static LLM-friendly HTML; highly structured glossary pages

Findings

llms.txt incomplete (17/50 posts, 0 glossary entries) **High**

18,006 glossary pages — the richest structured content — absent from AI reference files.

Recommendation: Regenerate with full blog + top glossary coverage.

llms-full.txt embeds broken 'Page not found' entry **High**

/blog/generic-hero section present in the AI reference file.

Recommendation: Strip broken entries during generation.

Templated llms.txt tool descriptions **Medium**

Repeated filler text reduces citation value.

Recommendation: Unique value props per tool.

No Q&A blocks in llms.txt **Low**

FAQ content not surfaced for AI answer extraction.

Recommendation: Add FAQ section.

2.7 Images

Score: **55/100**

What Works

- og-image.png serves correctly (200, 197KB, 1200x630)
- Self-hosted blog heroes (picsum hotlink removed)

Findings

Alt-text quality unverified at scale **Medium**

Prior audit noted alt corruption from glossary-link injection; needs recheck post-remediation.

Recommendation: Script-scan blog heroes for alt integrity.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Purge 324 double-vs glossary URLs from sitemap; fix /glossary/vidiq-vs-tubebuddy EN/ES
- 301 five residual /tools/* twins → /blog/* (or noindex tool variants)
- Regenerate sitemap; verify 0 non-200 in a 50-URL glossary sample

Phase 2: High-Impact Improvements Weeks 2-3

- Fix /tools canonical to <https://yt-seo-architect.vercel.app/tools>
- Add canonicals to about/privacy/terms/contact; dedupe blog canonicals
- Regenerate llms.txt/llms-full.txt with full blog + glossary coverage
- 410 or remove /blog/generic-hero

Phase 3: Content & Authority Month 2

- Person/Author schema + author pages (E-E-A-T)
- Rewrite boilerplate tool descriptions to unique value props
- Trim blog SERP titles to ≤60 chars
- Add VideoObject schema where relevant

Phase 4: Monitoring & Iteration Ongoing

- Connect GOOGLE_API_KEY + GSC for CrUX/GSC field data
- Split sitemap into index files
- Re-audit monthly; track score deltas

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
