3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **yt-seo-architect.vercel.app** for a **SaaS Web Application (free AI YouTube SEO tool)** site, generated on August 05, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

96/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** All 2026-08-03 critical/high issues verified fixed and live
2. **Info:** CSS pipeline fixed: no data: URI CSP blocks, no duplicate stylesheet sets (~428KB saved)
3. **Info:** WebP adoption complete: 102 blog heroes + homepage dashboard hero
4. **Info:** llms.txt regenerated: 54 posts + 98 tools + 150 glossary terms, clean descriptions
5. **Info:** Zero broken sitemap URLs (250/250 sample = 200)

Quick Wins:

1. Add secondary AI crawler rules to robots.txt (GrokBot, Amazonbot, Meta-ExternalAgent, etc.)
2. Fix homepage H1 spacing typo 'Generator.100%'
3. Add lastmod to glossary sitemap entries
4. Enable field CWV via GOOGLE_API_KEY

2. Audit Categories

2.1 Technical SEO

Score: **98/100**

What Works

- Sitemap 0% broken (was 28.75%) — 250/250 sampled URLs return 200
- Security headers complete: HSTS preload, CSP, XFO, nosniff, Referrer-Policy
- robots.txt exemplary AI-crawler policy
- No soft-404s; real 404s for nonexistent URLs
- Immutable caching on /assets/* and /js/*
- CSP whitelists cdn.jsdelivr.net (Vercel Analytics works)

Findings

Secondary AI training crawlers not addressed in robots.txt **Medium**

11 secondary crawlers (GrokBot, Amazonbot, Meta-ExternalAgent, Cohere-Research, YouBot, etc.) have no explicit rules — silently allowed by User-agent: * catch-all. If training-block intent is desired, they should be disallowed.

Recommendation: Add Disallow rules for training crawlers (GrokBot, Amazonbot, Meta-ExternalAgent, Cohere-Research, AI2Bot, etc.) while keeping search/AI-answer crawlers allowed.

lastmod missing on glossary sitemap entries **Low**

17,682 glossary URLs have no lastmod (removed to avoid build-stamp distrust). Google treats them as unknown freshness.

Recommendation: Emit real per-term lastmod from glossary-data.json, or accept unknown freshness for programmatic terms.

Divergent CSPs across routes **Low**

vercel.json CSP (comprehensive) vs helmet short CSP on some API routes.

Recommendation: Consolidate to a single CSP definition.

2.2 Content Quality

Score: 95/100

What Works

- All 98 tool pages now 500+ visible words with how-to + FAQ + related tools (verified live: 552-589 words sampled)
- Category hubs expanded to 500+ words with CollectionPage schema
- Named author Patrick in Person schema + bylines + meta author
- About page 1,232 words with founder attribution
- Zero thin pages (<300 words) found in scan

Findings

Some tool-page FAQ content uses shared boilerplate **Low**

Fallback content template shared across ~78 tool pages; 20 have custom niche content. Not duplicate (topic-specific), but lower uniqueness than ideal.

Recommendation: Prioritize custom content for highest-traffic tools; acceptable for long-tail.

2.3 On-Page SEO

Score: 97/100

What Works

- Homepage H1 targets 'Free YouTube SEO Tool' head term
- Meta descriptions present on all sampled pages
- 1 H1 per page site-wide (scan verified 0 multi-H1)
- Canonicals clean — no 3xx targets
- Cannibalization resolved (blog/tools 301s)

Findings

Homepage H1 spacing typo **Low**

H1 renders 'Generator.100% Free, Unlimited.' — missing space after period (line break artifact).

Recommendation: Add space: 'Generator. 100% Free, Unlimited.'

Tool inventory count mismatch **Medium**

Hub links 23 tools vs title/meta '90+' vs llms.txt 98. Multiple URL forms exist (/tools/X, /tools.html, /public/tools/X.html).

Recommendation: Consolidate tool URL forms; align displayed count with linked count.

2.4 Schema / Structured Data

Score: **100/100**

What Works

- Homepage: valid @graph with Organization, WebSite, SoftwareApplication, FAQPage, BreadcrumbList
- Blog posts: Article + FAQPage with Person author 'Patrick' (verified 40/40 valid)
- Category hubs: CollectionPage + BreadcrumbList
- /tools: WebPage + ItemList; /about: AboutPage + Organization + founder; /pricing: WebPage + Offer
- Glossary terms + /vs pages: Article/FAQPage valid

2.5 Performance (CWV)

Score: **90/100**

What Works

- CSS pipeline fixed: 5 async links, no data: URI CSP blocks, no duplicate sets (~428KB saved)
- Lucide bundled locally with immutable caching
- WebP images across blog + homepage hero
- HTML cached, hashed assets immutable

Findings

Dashboard JS bundle 536KB (146KB gzip) unsplit **Medium**

dashboard-vLhkHsXF.js ships all feature code on first paint; no route-level code splitting.

Recommendation: Route-level dynamic import per tool; target <150KB gzip per route.

No field CWV data (CrUX) **Medium**

No GOOGLE_API_KEY — LCP/INP/CLS estimated from structure only.

Recommendation: Configure GOOGLE_API_KEY for CrUX field data (script exists: scripts/fetch-crux-field-data.mjs).

2.6 AI Search Readiness (GEO)

Score: **68/100**

What Works

- robots.txt: 8 AI search/answer crawlers allowed, GPTBot/CCBot blocked
- llms.txt regenerated: 54 posts + 98 tools + 150 glossary terms, clean descriptions
- FAQPage schema feeds direct AI answers
- Hreflang en/es/pt correct

Findings

llms.txt secondary crawler policy gaps Medium

GrokBot, Amazonbot, Meta-ExternalAgent, Cohere-Research and 7 others have no explicit robots rules.

Recommendation: Add explicit rules for all known AI crawlers.

2.7 Images

Score: **95/100**

What Works

- Homepage dashboard hero (WebP 43KB + PNG fallback, descriptive alt, width/height)
 - 102 blog hero/OG images converted to WebP (quality 82)
 - DB-rendered blog heroes now use <picture> WebP with PNG fallback
 - og-image.png 1200x630 serves 200
-

3. Action Plan

Phase 1: Verified Fixed (2026-08-05) Complete

- CSS pipeline (data: URI CSP block + duplicate sets) — deployed
- WebP blog heroes via <picture> — deployed
- llms.txt coverage 30 → 54 posts, 40 → 98 tools, clean descriptions — deployed
- /js/* immutable caching — deployed
- Homepage hero image with alt — deployed

Phase 2: Quick Wins Week 1

- Add secondary AI crawler rules to robots.txt
- Fix H1 spacing typo
- Align tool inventory count + URL forms

Phase 3: External Authority Month 1-2

- Connect GOOGLE_API_KEY for CrUX field data
- Acquire owned domain + 301 (H5)
- Earn first 10 third-party dofollow backlinks (C3)
- Common Crawl presence + GSC/Bing verification

Phase 4: Monitoring Ongoing

- Re-run /seo audit monthly
- Track GSC impressions post-fix
- Drift baseline after 30 days

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
